PROFILE SUMMARY

Enthusiastic and detail-oriented Computer Science with hands-on experience in frontend development through projects and personal coding endeavors. Proficient in HTML, CSS, JavaScript, and modern frontend frameworks. Seeking a frontend web developer role to leverage my skills in creating dynamic and user-friendly web applications.

WORK EXPERIENCE

FRESHER

PERSONAL PROJECTS

Kitchen Kingdom

- To build the Kitchen Kingdom food app, begin by setting up a React.js project with Redux for state management. Implement key features such as recipe search, add to cart, total items, and total amount. Use React Router for navigation between categories. Style the app with Tailwind CSS and responsive design. Finally, deploy the app using platform Vercel for easy hosting and continuous updates.

Mariachi Food PSD

- This project is a fully responsive Website designed to help businesses enhance their online presence. Built using HTML, CSS, and JavaScript, the website delivers a seamless user experience across all devices—desktops, tablets, and mobile phones. The site features a modern, clean design with easy navigation, allowing potential clients to quickly explore services, read about the agency, and get in touch for consultations.

WEATHER APPLICATION

- This Live Weather Application provides users with real-time weather information based on their current location. The project leverages the Geolocation API to detect the user's location and the OpenWeather API to fetch accurate weather data. With a user-friendly interface, the application is responsive and works seamlessly across all devices, including smartphones, tablets, and desktops.
